

Schwarzschild circular orbit: gauge contribution to h_{uu}

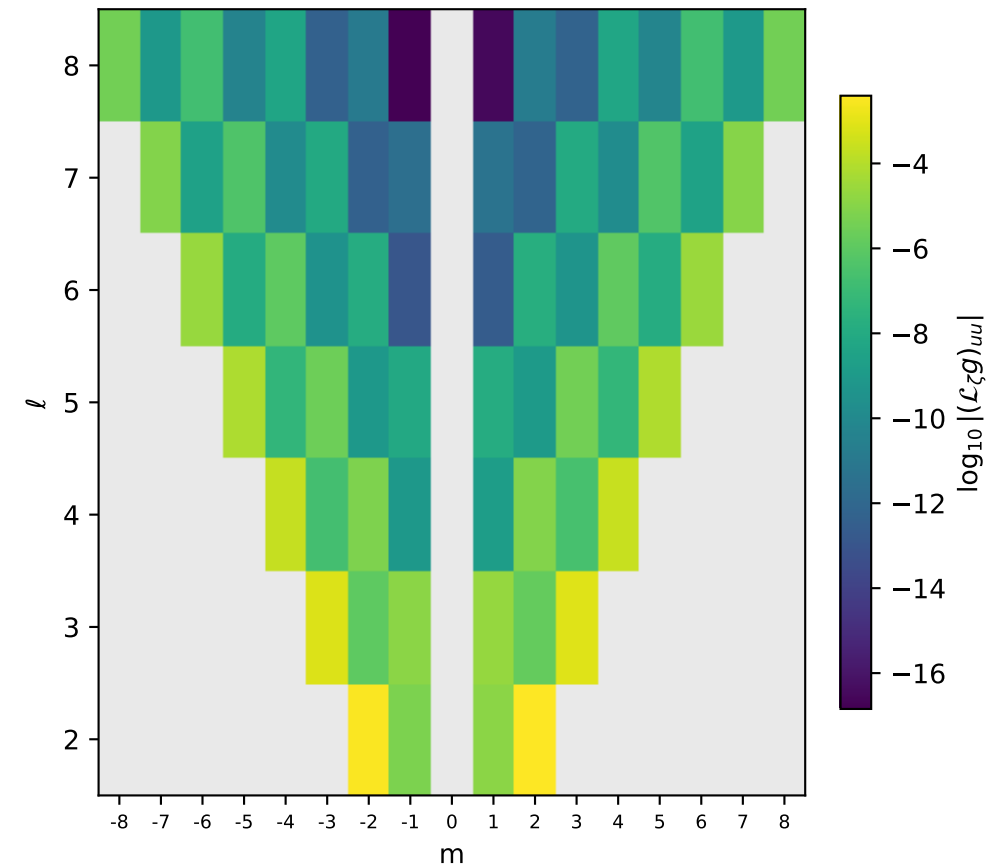

Gauge-vector contraction $|u \cdot \zeta|$

Helical: $\omega = m\Omega$

Control: $\omega = m\Omega + 0.004$

$$M = 1, r_0 = 10; (\mathcal{L}\zeta g)_{uu} = 2iu^u(m\Omega - \omega)(u \cdot \zeta)e^{i(m\phi - \omega u)}$$
